SUMMARY

Product Manager with 4+ years building systems from scratch in fintech and travel-tech. At Bajaj Finserv I built the Payout Calculation Management System from the ground up, cutting Fixed Deposit booking turnaround from 7 days to 1. At SmartSites I lead a 40-person distributed team and cut project turnaround from 10 days to 2 by rethinking how the team used AI in its workflow, not just bolting a tool on. I write SQL myself rather than only reading dashboards, and the Bajaj Finserv rollout meant real change management across compliance, operations, and business stakeholders, not just a product launch. Looking for a Senior Product Manager role where I can keep working close to the data and the people who use it.

KEY SKILLS

Product Strategy | Roadmapping | Product Lifecycle Management | PRD and Requirements Writing | Cross-Functional Prioritization | Stakeholder Management | Change Management | Partner and Vendor Onboarding | Agile / Scrum | Sprint Planning | SQL and SQL Server | Data Management and ETL Pipelines | Power BI | Amplitude | Salesforce CRM | API and System Integration | JIRA | Azure DevOps | Figma

EXPERIENCE

Product Manager, SmartSites, Mohali, India Sep 2025 – May 2026
Digital Marketing, Design and Development

- Own intake-to-delivery for 30+ concurrent design projects across a distributed India-US team. Sync daily with US-based PMs and direct a 40-person team across social, video, web, and branding work.
- Dug into where projects were actually getting stuck, then introduced AI-assisted workflows to fix it. Cut average project turnaround from 10 days to 2.

Chief Digital Growth Officer, Leading Edge Info Solutions, Mohali, India (Contract) Sep 2024 – Dec 2024
Digital Marketing, Design and Development

- Ran a 10-person team shipping internal and client websites, including ecommerce builds, end to end.
- Built AI-based templates to close the handoff gap between Sales and Development.
- Trained 30+ employees across 20+ sessions on new tools and ways of working.

Unit Manager (Product Owner, Partner Platforms), Bajaj Finserv, Pune, India Apr 2022 – Apr 2024
Fintech

- Led the revamp of the Partner, Customer, and Partner-Onboarding portals, taking adoption from 2% to 45% and cutting Fixed Deposit booking turnaround from 7 days to 1 day. That was real change management, not a feature flag flip: phased release, and stakeholder buy-in across technology, operations, business, and compliance.
- Built the Payout Calculation Management System from scratch, integrating with Finacle over REST APIs to replace a manual Excel process. Cut sales-team effort 30% and fraud risk 20%. Received the Heroes Award for it.

Domain Support Specialist, Ericsson, Noida, India Jan 2021 – Apr 2022
Telecommunications

- Automated restoration, health-check, and backup processes in Python and Shell on Linux. Cut downtime from hours to minutes for 1,000+ users and improved network reliability by 15%.

SELECTED PROJECTS

The Verification Gap, Citation Discrepancy Audit: Audited a real, public Deloitte report by hand. Checked all 100 in-text citations against the bibliography and found 51 with no source entry at all, then mapped each to its exact page and claim. Built a discrepancy-detection framework and platform architecture from what that turned up.

Flight Booking Product Teardown, MakeMyTrip: Funnel and requirements teardown with three personas, a journey map, RICE and MoSCoW-scored recommendations, and HEART metrics and OKRs.

AI Trip Planner, PRD ("Wayfare AI"): End-to-end PRD covering goals and non-goals, prioritized P0-P2 requirements, user stories, a phased launch plan, and success metrics.

Travel Support AI Copilot: Agentic customer-support assistant, live interactive demo, that answers and actually executes requests: cancellations, refunds, baggage queries, date changes, with guardrails and human escalation for the risky cases.

SQL and Amplitude Analytics Practice: Wrote SQL against a SaaS subscriptions dataset (joins, CTEs, window functions, cohort retention), plus event-level segmentation, funnels, and retention analysis in a live Amplitude account, including a real product bug I found and fixed.
