

Bhawna Mangla

Product Manager | FinTech | AI Products | 4+ Years

bhawna202019@gmail.com | +91 9914956262 | linkedin.com/in/bhawnamangla | github.com/bhawnamanglapm | Gurugram, India

SUMMARY

Product Manager with 4+ years in fintech, known for turning complex operational problems into shipped results — a Bajaj Finserv workflow overhaul that cut turnaround from 7 days to 1 day, an 18-agent AI system (Career Copilot), and a privacy-first Chrome extension (Weft) that turns observed workflows into automation opportunities. Seeking Senior PM roles in fintech and AI products.

KEY SKILLS

Product Management | Project Management | Product Strategy | Product Roadmap | Product Life Cycle Management | Agile | Scrum | Sprint Planning | User Stories | PRD | Stakeholder Management | FinTech | Finacle | JIRA | Azure DevOps | SQL | Salesforce CRM | Python | Agentic AI

EXPERIENCE

Product Manager — Smartsites Sep 2025 - May 2026

- Owned intake-to-delivery coordination for 30+ concurrent design projects at UIUX Studio, Smartsites' partnered design studio — cross-verifying requirements with US-based PMs and assigning work across a 40-person design team (20 per shift) by designer specialization, spanning social graphics, video, homepages, landing pages, presentations, wireframes, branding guidelines, and tiered design audits.
- Managed daily and weekly workload planning for the design team, re-prioritizing as client requirements shifted, and led a 3-member enablement team responsible for translating requirements to designers and surfacing quality feedback to both designers and PMs.
- Ran recurring process syncs with the US team on AI adoption and workflow optimization, cutting average project turnaround time from 10 days to 2 days, and reported monthly performance to the business head.

Career break (personal) - Jan 2025 - Aug 2025

Chief Digital Growth Officer — Leading Edge Info Solutions Pvt Ltd, Mohali Sep 2024 - Dec 2024

- Spearheaded a 10-person team designing and developing internal and client websites from inception to launch, including comprehensive testing to ensure quality output.
- Engineered AI-based templates for business-procedure flows, optimizing the handoff from Sales to Development.
- Identified skill gaps and led training for 30+ employees, delivering 20+ presentations as part of a customized development program.
- Negotiated with third-party tool providers (including Nifty), securing favorable terms on project management tool subscriptions.

Unit Manager — Bajaj Finserv Apr 2022 - Apr 2024

- Led the revamp of the Partner Portal, Customer (Experia) Portal, and Partner Onboarding websites, increasing portal usage from 2% to 45% through targeted go-to-market strategies, and separately cut Fixed Deposit booking turnaround from 7 days to 1 day.
- Developed a regulatory-compliant FD Partner Onboarding App for individual and non-individual partners, driving a 30% increase in sales-team operational efficiency; engineered the Payout Calculation Management System (PCMS), integrating with Finacle to eliminate manual Excel dependency.
- Implemented advanced authentication (employee deduplication, fraud prevention), reducing fraud risk by 20%.
- Designed 15 UX prototypes in Figma incorporating user feedback, improving the customer service platform's usability score by 40%; shipped ACMS, a creative-distribution tool for partner festival banners, standees, and email campaigns.
- Tracked KPIs and generated reports via Salesforce CRM to inform product decisions; reduced time-to-market for new features by 20% through Agile implementation.
- Achievements: Heroes Award and a recognition trip to Vietnam for exceptional contribution.

Domain Support Specialist — Ericsson Jan 2021 - Apr 2022

- Streamlined restoration processes with automated scripts (Python/Shell on Linux), cutting average downtime from hours to minutes and improving service availability for 1,000+ users without increasing team workload.
- Automated network health checks, error-count monitoring, and backup processes, eliminating 100% of the associated manual tasks.
- Collaborated with cross-functional teams to document and implement change requests, improving network reliability by 15%.

EDUCATION

MBA, Business Analytics - Amity University, 2024 - 2026 (Correspondence)

B.Tech / B.E., Information Technology - Jaypee University of Information Technology, Solan, 2016 - 2020 (Full Time)

IT SKILLS

JIRA | Power BI | Salesforce CRM | Azure DevOps | SQL | Figma | Claude Code | Python | Linux | WireShark

PROJECTS

Career Copilot - Self Work (Remote: Offsite), Jul 2026 - Present (Full Time)

Live: careercopilot19.streamlit.app

Built an 18-agent AI system that turns a resume and job posting into a verified application package — tailored ATS-optimized resume, company research, skills-gap analysis, cover letter, and interview prep — in under a minute. Every agent shares a schema with forced structured output; a Critic agent reviews all outputs before a Supervisor renders a final go/no-go verdict. Live dashboard with real-time execution tracking. Tech: Python, Pydantic, Claude API, Streamlit.

Weft - Self Work (Remote: Offsite), Jun 2026 - Present (Full Time)

github.com/bhawnamanglapm/Weft

Building a Chrome extension (Manifest V3) that discovers how people actually work: it observes a user's workflow locally, redacts PII, and reconstructs the captured actions into structured steps — with everything running client-side, no backend or network calls, by design. Once complete, it will merge multi-session captures into a shared process map, surface AI/automation suggestions, generate an automation brief, and export directly to ticketing tools with ROI tracking. Status: capture, PII redaction, workflow reconstruction, and privacy-preview UI are built and tested (4 of 9 planned milestones); process-map merge, automation brief, and ticket export are in progress. Tech: TypeScript, React, Vite, React Flow, Chrome MV3, Vitest.

AI Builder OS - Self Work (Remote: Offsite), May 2026 - Present (Full Time)

github.com/bhawnamanglapm/AI-Builder-OS

Designing and scaffolding a personal AI product development system - a structured lifecycle (Idea to Research to PRD to Architecture to Build to Test to Portfolio to Resume) for building AI products, with dedicated modules for a reusable agent library, prompt library, architecture-pattern library, and automated portfolio/resume-evidence generation. Status: repository structure, templates, and dashboard scaffolding in place; agent library and automation modules in progress. Tech: Python, FastAPI, Claude/OpenAI/Gemini APIs, LangGraph, CrewAI, Next.js.
